DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-7, drawn to a molecular size marker and methods for the production thereof, wherein the marker comprises fragments of 441, 325, 231, 210, 131, 116, 94 and 79 base pairs.

Group I, claim(s) 8-14, drawn to a molecular size marker and methods for the production thereof, wherein the marker comprises fragments of 181, 161, 152, 139, 127, 103, 87, 69, 59, 58, 42, 40, 36, and 34 base pairs.

2. The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons. Inventions I-II differ with regard to the structural and functional characteristics of the molecular size markers claimed (note, e.g., the different sized fragments that characterize the markers, and the differing species used in their production as set forth in claims 4 and 11). The methods of the inventions, while employing different mycobacteriae and producing different sized fragments, employ common steps (see, e.g., claims 2 and 9) and common primers (see claims 5 and 12). However, the primers and method steps of the claims were taught in the prior art, such that these shared features cannot constitute a special technical feature under PCT Rule 13.2. For example, the prior art reference of Brunello et al (Journal of Clinical Microbiology 39(8):2799-2806 [August 2001]) teaches the primers of the claims and their use in PCR, as well as mycobacterial DNA isolation, amplification of hsp65, purification of PCR products, and restriction enzyme digestion (see entire reference, particularly page 2799, right column and 2801, left column), and techniques of cloning and plasmid vector isolation were widely used and routine in the art at the time of applicants' invention. Accordingly, unity of invention is lacking with regard to Inventions I-II.

3. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the

requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
